Energy Services

Air Tightness Testing
Display Energy Certificates
Domestic Energy Performance Certificates
Non-Domestic Energy Performance Certificates
SAP Calculations

Aircraft Engine Test Cells and Noise Monitoring of Test Facilities.

If not suitably controlled and accounted for, noise associated with airports and airfields can cause serious disturbance to neighbouring communities.

In addition to noise produced during flying operations, other major sources include ground testing of aircraft, engines, which often occurs at night and airport related traffic. Helicopters and heliports pose particular environmental noise problems.

Acoustic Associates can help by providing advice that will help you control the noise. Give us a call and one of the team will be more than happy to talk about your project.
